**Theoretical and Experimental Analysis of Interfacial Instabilities in
Multi-layer Flows for Different Polymer Melts**

*Martin Zatloukal (a), Mike T. Martyn (b), Phil Coates (b)

University of Bradford, UK*

Theoretical and experimental analysis were performed for coextrusion flow of two different LDPEs with the aim to more deeply understand the onset of the interfacial instabilities. For that purpose, flow visualization cell experiments together with viscoelastic FEM analysis have been employed.
