Reifenhäuser REICOFIL GmbH & Co. KG, Germany

This lecture will deal with the latest development in REICOFIL® Technology – both Spunlaid and Meltblown.

The development of the most recent REICOFIL®4 technology in comparison to its predecessors will be described. The process is suitable for mass markets in regard to performance criteria but also for niche applications which require more sophisticated solutions like REICOFIL® BICO for loft products, wipes, etc.

The developments in REICOFIL® Meltblown allow to make sophisticated filters and improved barrier properties especially for medical protection applications.
