

Carbon and organic nanotubes and some of their Bio-applications

*Mosto Bousmina**

INANOTECH - Rabat - Morocco

We will present some new results about the fabrication of carbon and organic-based nanotubes. The subject is vast and hence it is a daunting task to summarise this remarkably rich and multifaceted area. Therefore, the presentation will focus on a few applications in the area of biomaterials, bio-medicine and in the area of sensors. Both results from the literature and those obtained in our laboratory will be presented.
